about me

Final-year student in Editorial Design with a background rooted in visual communication and applied arts. I have developed skills in graphic design for both print and digital, with hands-on experience in academic, institutional and cultural settings. My approach combines creativity, method and attention to detail. I also have a strong interest in the world of sport and sports communication, a field I follow and explore in depth on an ongoing basis through research and analysis of visual and media languages.

I am proficient with the main professional tools, including Adobe Creative Suite, Figma, Glyphs and Meta Business Suite, and I also integrate Artificial Intelligence tools into my workflow for research, ideation, the optimisation of creative processes and content production.
